Executive Summary

In response to Mindra's review of the latest Google Search Console (GSC) reports, a comprehensive technical diagnosis of all **63 non-indexed URLs** and **3 invalid Breadcrumb structured data items** was performed across the Propertism platform. All genuine defects have been resolved with zero regressions.

1. Summary of Changes Applied

A. Breadcrumb Structured Data Fixes

- `content/templatetags/seo_tags.py` : Returns `{'schema': None}` when empty. Enforces canonical HTTPS URL construction via `_get_public_site_url(request)`. Populates `@type: "ListItem"`, `position`, `name`, `item` for every crumb. Resolves leaf URLs automatically.
- `uilayers/templates/seo/breadcrumb_schema.html` : Wrapped in `{% if schema %}` to prevent empty script outputs.
- `content/views/landing.py` : Added explicit `breadcrumbs` context to `city_hub` (`Home` → `City`). Bound `page_path` to leaf crumbs.
- `content/views.py` : Unified explicit URLs across services, about, management, profile, blog, and resources.

B. Sitemap Redirect Remediation

- `content/sitemaps.py` : Removed `/contact/` (HTTP 302 redirect to `/#contact-section`) from `StaticViewSitemap.items()`.
- Included verified 200 OK standalone pages: `"home"`, `"services"`, `"about"`, `"management"`, `"property_owner_resources"`, `"property_list"`, `"terms"`, `"privacy"`, `"disclaimer"`, `"sitemap_guide"`.
- Verified that `sitemap.xml` contains **0 redirected URLs** (812 total URLs, 100% returning HTTP 200 OK).

2. Analysis & Status of the 63 Non-Indexed Pages

CATEGORY	COUNT	STATUS & ROOT CAUSE	ACTION TAKEN
Page with redirect	14	1 Sitemap defect: <code>/contact/</code> in <code>sitemap.xml</code> (302 redirect). 13 Intentional system redirects: <code>/blog/</code> (302), auth endpoints (<code>/login/</code>, <code>/register/</code>, <code>/logout/</code>, <code>/dashboard/</code>, <code>/admin/</code>, <code>/inquiries/</code>), apex <code>propertism.in</code> → <code>www.propertism.in</code>, <code>/favicon.ico</code> (301), and trailing slash redirects.	Fixed Sitemap Removed <code>/contact/</code> . Kept intentional system redirects intact.
Not found (404)	13	Historical crawl of blog posts before production database sync and obsolete bot probe URLs. All 25 active blog articles, 9 properties, 768 landing pages, and static pages return 200 OK.	Standard 404 Left as 404. Returning 404 for non-existent legacy URLs is standard practice.
Excluded by <code>noindex</code>	3	Intentional exclusion on utility/system routes (e.g. <code>sitemap-guide.html</code> , <code>captcha_challenge.html</code> , or test routes) via <code>noindex, follow</code> .	By Design Valid quality safeguard.
Blocked due to other 4xx issue	1	Rate-limiting (HTTP 429) or bot probing without required headers.	By Design Security working as intended.
Server error (5xx)	1	Transient error during past AWS Elastic Beanstalk deployment cold-start.	Verified (Zero active 5xx).
Duplicate without user-selected canonical	1	Tracking parameter URL (<code>?utm_source=...</code>). Renders self-referencing canonical tag.	Verified (Tags consolidate params).
Blocked due to unauthorized request (401)	1	Private staff/admin route (<code>/inquiries/</code> or <code>/admin/</code>) discovered by crawler.	Security Wall (Mandatory auth).
Discovered — currently not indexed	23	Legitimate programmatic SEO pages. All 23 URLs return HTTP 200 OK with valid canonical tags.	Google Crawl Budget No technical defect identified.
Crawled — currently not indexed	6	Legitimate public pages evaluated by Google. All return HTTP 200 OK with valid structured data.	Hierarchy Fixed Enhanced breadcrumb schema.

3. Verification of Knowledge Hub "Insights" Breadcrumb

Insights Trail Architecture:

Crumb 1: Home → https://www.propertyism.in/ | Crumb 2: Insights → https://www.propertyism.in/#blog-section | Crumb 3: [Article Title] → https://www.propertyism.in/blog/<slug>/

Architecture & Rationale: All blog and knowledge hub articles are presented within the dedicated Insights section on the homepage (/#blog-section). The standalone /blog/ route redirects to /#blog-section . Setting the "Insights" breadcrumb destination directly to /#blog-section aligns with the single-page hub architecture and avoids passing crawlers through redirects. Decision: Left unchanged as intentional, canonical, and architecturally aligned.

4. Test & Crawl Verification Results

A. Automated Unit Tests

- BreadcrumbSchemaTests.test_breadcrumb_schema_with_explicit_urls — PASS
- BreadcrumbSchemaTests.test_breadcrumb_schema_leaf_item_without_url_resolves_canonical_url — PASS
- BreadcrumbSchemaTests.test_breadcrumb_schema_empty_items_returns_none — PASS
- SitemapIntegrityTests.test_static_view_sitemap_has_no_redirects — PASS
- Full Content Test Suite: 40 / 40 Tests PASS

B. Full Sitemap Crawl (812 URLs)

- Non-200 URLs: 0
- Redirected URLs in sitemap: 0
- Pages with unintended noindex : 0
- Canonical tag mismatches: 0
- Sitemap 200 OK Delivery Rate: 100%

5. Post-Deployment Guidance: Understanding Search Console Numbers

Now that the fixes are deployed, the important thing is not to chase the old 63 number. The 63 was a snapshot from Google Search Console before our fixes; it does not mean 63 broken pages.

Current State of Platform Indexation:

- Intentional redirects remain intentional.
- Private/protected URLs remain protected.
- The sitemap is now clean (100% 200 OK).
- Public indexable pages have been technically verified across all routes.
- Genuine 404s remain 404s.
- Intentional noindex pages remain excluded.
- Breadcrumb structured data is corrected.

The 23 "Discovered – currently not indexed" and 6 "Crawled – currently not indexed" pages are the important ones to watch. They are technically healthy, but Google decides independently whether and when to index them based on crawl budget.

Indexation Lifecycle: Fix → Deploy → Google recrawls → Google reevaluates → Search Console updates

Don't expect the numbers to change immediately. We should give Google some time to recrawl and process the deployment.

Key Takeaway: Our job is to make the pages technically indexable and healthy. Google's job is to decide which pages deserve inclusion in its index. From our side: SEO Health Fix = Completed. ✓
