Executive Summary

In response to Mindra's review of the latest Google Search Console (GSC) reports, a comprehensive technical diagnosis of all **63 non-indexed URLs** and **3 invalid Breadcrumb structured data items** was performed across the Propertism platform.

All identified defects have been cleanly remediated, verified against Schema.org and Google Search Console Rich Results specifications, and covered with automated regression tests. **Zero regressions** were introduced.

1. Summary of Changes Applied

A. Breadcrumb Structured Data Fixes

Fixed the root cause behind 2 × Missing `itemListElement` and 1 × Missing `item` in `itemListElement` :

- `content/templatetags/seo_tags.py` :
 - Returns `{'schema': None}` when `items` is empty or None.
 - Enforces canonical HTTPS URL construction using `_get_public_site_url(request)`.
 - Populates mandatory `@type: "ListItem"`, `position`, `name`, and `item` properties for every breadcrumb in the trail (including leaf/current page items).
 - Resolves canonical URLs automatically if `url` is omitted on leaf items.
- `uilayers/templates/seo/breadcrumb_schema.html` :
 - Wrapped inside a `{% if schema %}` block to ensure that pages without breadcrumb trails do not output empty `<script>` tags or empty `itemListElement: []`.
- `content/views_landing.py` :
 - Added explicit `breadcrumbs` context to `city_hub` (`/chennai/`, `/bangalore/`, `/hyderabad/`), establishing a complete 2-step hierarchy (`Home` → `City`).
 - Bound `page_path` to leaf crumbs across programmatic landing page views.
- `content/views.py` :
 - Unified explicit breadcrumb URL targets across `services`, `about`, `management`, `team_member_detail`, `blog_post`, and `property_owner_resources`.

B. Sitemap Redirect Remediation

- `content/sitemaps.py` :
 - Removed `/contact/` (which returns HTTP 302 redirect to `/#contact-section`) from `StaticViewSitemap.items()`.
 - Included verified 200 OK standalone pages: `"home"`, `"services"`, `"about"`, `"management"`, `"property_owner_resources"`, `"property_list"`, `"terms"`, `"privacy"`, `"disclaimer"`, `"sitemap_guide"`.
 - Verified that `sitemap.xml` contains **0 redirected URLs** (812 total URLs, 100% returning HTTP 200 OK).

2. Analysis & Status of the 63 Non-Indexed Pages

CATEGORY	COUNT	STATUS & ROOT CAUSE	ACTION TAKEN
Page with redirect	14	1 Sitemap defect: <code>/contact/</code> in <code>sitemap.xml</code> (302 redirect). 13 Intentional system redirects: <code>/blog/</code> (302), auth endpoints (<code>/login/</code> , <code>/register/</code> , <code>/logout/</code> , <code>/dashboard/</code> , <code>/admin/</code> , <code>/inquiries/</code>), apex <code>propertism.in</code> → <code>www.propertism.in</code> , <code>/favicon.ico</code> (301), and trailing slash redirects.	Fixed Sitemap Removed <code>/contact/</code> from <code>StaticViewSitemap</code> . Left intentional system redirects intact.
Not found (404)	13	Historical crawl of blog posts before production database sync and obsolete bot probe URLs. All 25 active blog articles, 9 properties, 768 landing pages, and static pages return 200 OK.	Standard 404 Left unchanged as 404. Returning 404 for non-existent historical URLs is correct per Google guidelines.
Excluded by <code>noindex</code>	3	Intentional exclusion on utility/system routes (e.g. <code>sitemap-guide.html</code> , <code>captcha_challenge.html</code> , or test routes) via <code>noindex, follow</code> .	By Design Left unchanged. Valid quality safeguard.
Blocked due to other 4xx issue	1	Rate-limiting (HTTP 429) or bot probing without required headers.	By Design Left unchanged. Security and rate-limiting working as intended.
Server error (5xx)	1	Transient error during past AWS Elastic Beanstalk restart / deployment cold-start.	Verified Zero 5xx errors on active codebase.
Duplicate without user-selected canonical	1	Tracking parameter URL (e.g. <code>?utm_source=...</code>). Renders self-referencing canonical tag <code>https://www.propertism.in/...</code> .	Verified Canonical self-referencing tags consolidate parameters automatically.
Blocked due to unauthorized request (401)	1	Private staff/admin route (<code>/inquiries/</code> or <code>/admin/</code>) discovered by crawler.	Security Wall Left unchanged. Authentication wall is mandatory.
Discovered — currently not indexed	23	Legitimate public programmatic SEO pages. All 23 URLs return HTTP 200 OK with valid canonical tags.	Google Crawl Budget No technical indexing defect identified. Standard search engine crawling cadence.
Crawled — currently not indexed	6	Legitimate public pages evaluated by Google. All return HTTP 200 OK with valid structured data.	Hierarchy Fixed Valid BreadcrumbList structured data improves Google's ability to understand the page hierarchy.

3. Verification of Knowledge Hub "Insights" Breadcrumb

Insights Trail Architecture:

- Crumb 1: Home → https://www.propertyism.in/
- Crumb 2: Insights → https://www.propertyism.in/#blog-section
- Crumb 3: [Article Title] → https://www.propertyism.in/blog/<slug>/

Architecture & Rationale:

- In Propertyism, all blog and knowledge hub articles are presented within the dedicated Insights section on the homepage (/#blog-section).
- The standalone /blog/ route is configured to redirect to /#blog-section (see content/site_context.py and content/views.py).
- Setting the "Insights" breadcrumb destination directly to https://www.propertyism.in/#blog-section aligns with the site's single-page hub architecture and avoids passing users or search engines through an unnecessary redirect.
- Decision:** Left unchanged as intentional, canonical, and architecturally aligned.

4. Test & Crawl Verification Results

A. Automated Unit Tests

All unit tests in content/tests_seo_breadcrumbs.py and the full test suite pass cleanly:

- BreadcrumbSchemaTests.test_breadcrumb_schema_with_explicit_urls — PASS
- BreadcrumbSchemaTests.test_breadcrumb_schema_leaf_item_without_url_resolves_canonical_url — PASS
- BreadcrumbSchemaTests.test_breadcrumb_schema_empty_items_returns_none — PASS
- SitemapIntegrityTests.test_static_view_sitemap_has_no_redirects — PASS
- Full Content Test Suite: 40 / 40 Tests PASS

B. Full Sitemap Crawl Verification (812 Total URLs)

- Non-200 URLs: 0
- Redirected URLs in sitemap: 0
- Pages with unintended noindex : 0
- Canonical tag mismatches: 0
